

## Serial Number Location Info on UPF Tanks

Regarding the serial number, if it's a new tank @ midyear 2012 forward, the s/n would be a six-digit number branded into the water fill tower.

\*\*\*\* If it predates midyear 2012, the s/n would typically be hand etched (ie: hand engraver) into the water fill tower on one of the sides (on the inside or outside) of the towers or on the underside of the hinged lid on the WF tower. Another possible alternate location may be on the top of the tank toward the rear above the weld where the top and rear wall are welded.

The older s/n would be something along this line: D4UPF1234567890C20

The newer (after mid-year 2012) serial number & UPF order number are the same. It would be something like this: 123456.
